## **EMPLOYMENT SUMMARY**

Since graduation, I have had over thirty five years continuous employment as a quantity surveyor, commercial manager and contracts/commercial/claims/management consultant working for, or on assignment to major contracting organisations and consultants in the UK and overseas, over two years in the Falkland Islands (South Atlantic). The last twenty years resident in Asia.

In the UK I worked on an extensive range of building and civil engineering projects and some of these involved participating in arbitration and litigation proceedings; in the Falkland Islands this involved the construction of the new airport and infrastructure facilities.

I have been based in Hong Kong (9 years) and Singapore (11 years) but also working on assignments across Asia in a range of countries including Hong Kong, PR China, Singapore, Malaysia, Indonesia, Philippines, Bangladesh, Thailand, UAE Dubai and also servicing clients in other countries.

Experience covers a wide range of complex construction projects in building, civil engineering, marine, oil storage and M & E/MEP involvement. Many of these were joint ventures and large infrastructure projects of a fast track nature involving roads, bridges, airports, LRT, MRT, railway systems and reclamation. Building experience includes residential accommodation, university facilities, high end office developments, hospitals, hotels, stadiums, exhibition centres, laboratory complexes, industrial warehouses, rail stations, fuel installations, refurbishment and minor works.

In particular I was involved with MEP claims and contractual issues for clients on the Changi Airport Terminal 3 Project. More recently I am becoming involved in Changi T5 Works.

I assisted with loss and expense claims on a major plant/petrochemical project in Indonesia throughout 2006 and during 2007/2008 advising and assisting clients with claims in the Middle East on the Dubai Airport Expansion Project (Terminal 3) on MEP issues.

I have been engaged on several major shopping, hospital and residential developments in Singapore and currently retained as contractual/commercials advisor on a major hospital project

I have been appointed as expert witness on a number of occasions on building and civil engineering disputes in Singapore and overseas and I have represented clients in Sub-Courts mediation and also in adjudication (SOPA) cases in Singapore.

I am currently engaged as quantum expert witness in Singapore and on a range of construction cases involving mediation, arbitration and litigation and also assisting various clients in the preparation of extension of time, loss and expense claims and providing support for pending adjudication, arbitration and litigation cases.

I am also retained by a number of clients in an advisory role for the currency of several major construction projects including hospitals and infrastructure work in Singapore and have become increasingly involved with projects where there are disputes concerning alleged defective works and the costs of potential remedial actions required.

Special interests are commercial/contractual and claims management including dispute avoidance and resolution, particularly using ADR methods such as the mediation process and partnering. I am computer literate in such software as Microsoft Excel, Word, Project, Powerpoint and others. Throughout my career I have worked extensively associated with major international contractors; European, Asian, Japanese, Korean, American and South African.

I have a good working knowledge and application of the major forms of contract such as FIDIC, JCT, GC/ Works, SIA, REDAS, PSSCOC, HK and ICE Civil Engineering Forms plus many bespoke forms of contract.
